EDUCATION

Bachelor of Computer Science (Honors) (GPA: 3.63/4)

September 2023 – August 2027

Conestoga College

Specialization: Cybersecurity

Relevant courses: Network Security, Software Security, Mobile and Networked Systems, Operating Systems, Advanced Technical Communication

TECHNICAL SKILLS

- **Programming Languages:** C, C++, C#, Java, JavaScript, HTML, CSS, Python, SQL.
- **Operating Systems:** Windows, Linux Ubuntu.
- **Tools & Software:** Visual Studio, Visual Studio Code, Eclipse, Git, Wireshark, Suricata, Figma, AWS
- **Database:** MySQL, MariaDB, PostgreSQL, MongoDB
- **Frameworks & Libraries:** React.js, Node.js, Next.js, .NET MAUI.
- **Core Competencies:** Automated Testing, Debugging, OOP, Software Development Life Cycle, Computer Network System, Network Security Assessment, Software Security Assessment.

PROJECTS

[HR Management System | Web-based system](#)

Tech used: Python, React.js, MongoDB, RESTful API, Git

- Developed a server-client architecture for a human resource managing system using Python for server-side logic and React.js for client front-end side.
- Connected front end and back end by RESTful API with data being encrypted securely.
- Implemented database management using MongoDB with efficient queries to retrieve data.
- Set up CI/CD pipeline on GitHub Action to make sure the project is always in production-ready stage.

[Leaf Laugh Love | Server-client Java Application](#)

Tech used: Java, MySQL, Git

- Developed a server-client architecture for an e-commerce system using Java Swing for the client interface and Java for server-side logic.
- Applied software development design principles – SOLID for maintainability, flexibility, and readability.
- Implemented database management using MySQL, handling orders and plant data, and responding to client requests.
- Integrated Socket programming for client-server communication to process orders and send status updates in real-time.
- Designed and built a client application that allows users to browse plants, place orders, and view order status updates.

[DriveTracker | Cross-platform .NET Application](#)

Tech used: C# .NET MAUI framework, Azure SQL Database

- Integrated an API to retrieve real-time road speed limits and compared them with actual driving speed for accurate violation detection.
- Utilized Azure for cloud-based data storage and syncing of driving records, ensuring scalability and data integrity.
- Followed Agile methodology throughout the development lifecycle, implementing iterative improvements and rapid prototyping for user feedback.
- Enabled cross-platform compatibility, allowing the app to run on both Android devices and through Visual Studio's Android emulator.

[Handwritten Digits Prediction | Convolutional Neural Network Deep Learning Model](#)

Tech used: Python, TensorFlow Python library

- Developed a Convolutional Neural Network (CNN) to predict handwritten digits from screenshots with no external lighting conditions.
- Achieved 99.08% validation accuracy and 5.1% validation loss, demonstrating high model performance.
- Preprocessed image data by converting to grayscale, resizing, and normalizing for optimal training efficiency.
- Designed and implemented a multi-layer CNN architecture using TensorFlow.
- Gained hands-on experience in deep learning, and model optimization.

CERTIFICATE

Google Data Analytics

Completed in June 2025

- Completed comprehensive training in data cleaning, transformation, and analysis using SQL, spreadsheets, and R.
- Authored complex SQL queries involving JOIN, GROUP BY, subqueries, and aggregate functions for reporting and data extraction.
- Applied data integrity principles including validation, consistency checks, and documentation of assumptions.
- Created dashboards and visualizations using Tableau to communicate insights for business decision-making.
- Conducted exploratory data analysis to identify trends and actionable patterns.
- Documented analytical processes and findings to ensure reproducibility and clarity.

ADDITIONAL SKILLS

- Strong analytical and problem-solving skills with hands-on experience in troubleshooting technical issues.
- Ability to write detailed technical documentation and standard operating procedures.
- Adept in organizing training sessions and providing clear instructions.
- Excellent verbal and written communication skills.
- Advanced knowledge of Microsoft Office 365.
- Fluent in English, Vietnamese, and basic communication in French.
